Cart lab: change driving force

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use controlled data to describe how net force affects acceleration.

SUCCESS CRITERIA - I can...

1. Change driving force while keeping total mass fixed.
2. Use data or a graph to compare accelerations.
3. Explain how resistance affects the ideal relationship.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A puck follows a circle at a steady 6 m/s. A student calls it equilibrium. Draw velocity at two points and correct the claim.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $a = F_{net}/M$; $F_{drive} = m_h g$.
Keep total moving mass M fixed. The driving weight equals net force only when resistance is negligible.

Worked reasoning: A 2 kg cart has net forces 2 and 6 N in two trials. Using $a=F/m$ gives accelerations 1 and 3 m/s². Tripling net force triples acceleration.

Your turn: Draw a force-versus-acceleration graph for these trials. Explain the meaning of the slope.

Marzano check - circle: ① ② ③

03 Interpret a force graph

For total mass 1.00 kg, use the ideal model table to find the slope of a versus net force. State its units and recover the mass.

F_{net} (N)	a(m/s²)
0.245	0.245
0.490	0.490
0.735	0.735
0.980	0.980

Marzano check - circle: ① ② ③

04 Design the controlled trial

Explain how transferring masses from cart to hanger changes driving weight without changing total moving mass. Plan a table with three force settings and three acceleration trials each.

Marzano check - circle: ① ② ③

Cart lab: change driving force

antocciphysics

Continue down each column.

05 Both variables change

System A has net force 2 N and mass 1 kg. B has 6 N and 2 kg. Compare accelerations and explain why tripling force does not triple acceleration here.

Marzano check - circle: 1 2 3

06 Choose a method

A 0.3 kg system accelerates at 0.5 m/s². Predict acceleration for 0.7 kg at the same net force. Explain the effect of greater resistance.

Marzano check - circle: 1 2 3

07 Exit check

An a-versus-F_{net} graph has slope 2.0(m/s²)/N. Find mass. Predict a at 1.5 N. Explain why plotting driving force instead of net force can produce an offset.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A 2 kg cart is pulled with 3, 5, 7 N and has accelerations 1, 2, 3 m/s². Infer a constant opposing force and show how the graph reveals it.

Marzano check - circle: 1 2 3
