From force diagrams to motion

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use a force diagram to predict acceleration and velocity change.

SUCCESS CRITERIA - I can...

1. Write a force sum along each chosen axis.
2. Connect net force and mass to acceleration.
3. Use velocity direction to decide the initial speed change.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 3 kg cart has 5 N right and 26 N left. Find acceleration. What else must you know to decide if it speeds up?

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $F_{g,\ parallel} = mg \sin\theta$; $F_{g,\ perpendicular} = mg \cos\theta$
$\Sigma F = ma$.
Ramp angle θ above horizontal. Components replace the weight vector; they are not extra forces.

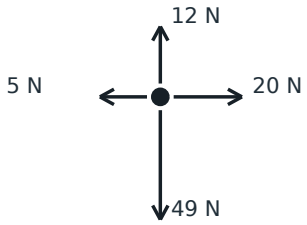

Worked reasoning: A 2 kg cart initially at rest has a constant 4 N net force right for 3 s. Acceleration is 2 m/s²; final speed is 6 m/s right.

Your turn: Draw a force diagram and a velocity-time graph that agree. Mark where mass enters the reasoning.

Marzano check - circle: ① ② ③

03 Angled pull

A 5 kg box stays on a level floor. A rope pulls with components 20 N right and 12 Nup; friction is 5 N left. Find normal force and horizontal acceleration. Use g=9.8.

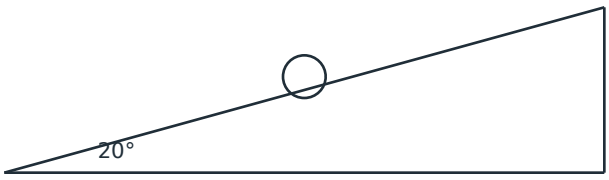

The dot represents the object. Normal not shown; find it

Marzano check - circle: ① ② ③

04 Frictionless ramp

A 2 kg cart slides down a 20° frictionless ramp. Find normal force and acceleration along the ramp. Use g=9.8 m/s².

The marker represents the object on the sloping surface.

Marzano check - circle: ① ② ③

From force diagrams to motion

antocciphysics

Continue down each column.

05 Oppose upward motion

A 4 kg block slides up a 30° ramp; kinetic friction is 5 N down the ramp. Use up slope positive. Find acceleration and describe the initial speed trend.

Marzano check - circle: 1 2 3

06 Choose a method

Velocity is +5 m/s for 7 s, then -4 m/s for 5 s. Find displacement and distance. Explain the reference information needed for an angle of 35°.

Marzano check - circle: 1 2 3

07 Exit check

A 2 kg block slides down a 30° ramp with 3.8 N friction up the ramp. Find along-ramp acceleration and normal force. Use g=9.8.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A 2 kg cart moving right at 8 m/s has a constant 4 N net force left for 6 s. Find when it turns, final velocity, displacement and distance.

Marzano check - circle: 1 2 3
