Equilibrium and missing forces

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Find a missing force when acceleration is zero.

SUCCESS CRITERIA - I can...

1. Recognize rest and constant velocity as possible equilibrium.
2. Find missing forces from a zero net-force condition.
3. Explain why turning is not equilibrium.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 3 kg box slides left at 5 m/s on a rough horizontal floor after release. Draw forces and explain what follows about vertical and horizontal acceleration.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Sigma F_x = 0$; $\Sigma F_y = 0 \Rightarrow a = 0$.
Equilibrium allows rest or constant velocity. Resolve missing forces along each axis. Use g = 9.8 N/kg.

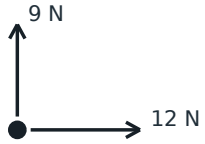

Worked reasoning: A sign has weight 10 N down and two vertical upward pulls of 4 and 6 N. The vector sum is zero, so equilibrium is possible.

Your turn: Draw and label all three forces. Identify the equation that checks vertical balance.

Marzano check - circle: ① ② ③

03 Two component balance

A stationary object has 12 N right and 9 Nup. A third force balances both. Find its components, magnitude and direction.

The dot represents the object. Third force not shown

Marzano check - circle: ① ② ③

04 Two-rope hanger

A 4 kg lamp hangs symmetrically from ropes 45° above horizontal. Find tension in each rope. Explain why it is not just half the weight.

Marzano check - circle: ① ② ③

Equilibrium and missing forces

antocciphysics

Continue down each column.

05 Change angle

A 10 kg sign hangs from two symmetrical ropes. First each is 30° above horizontal, then 60°. Find tension in each case and compare.

Marzano check - circle: 1 2 3

06 Choose a method

A=(7, -5) m and B=(-5, 9) m. Find R, magnitude and direction. Choose C so A+B+C=0 and sketch the route.

Marzano check - circle: 1 2 3

07 Exit check

A 3 kg lamp hangs at rest from one vertical rope. Find tension. Would that value hold if it accelerated upward? State an equation.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A stationary junction has a 30 N horizontal force right, a 40 N vertical force down, and one unknown force. Find the unknown vector, magnitude and direction.

Marzano check - circle: 1 2 3
