What changes an asteroid’s path?

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain how gravity can change velocity without contact.

SUCCESS CRITERIA - I can...

1. Draw velocity tangent to a path and force toward the attracting body.
2. Distinguish motion from a change in motion.
3. State what a straight-line model leaves out.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 3 kg cart starts from rest under 15 N net force right for 2 s. Find acceleration and final velocity. State one assumption.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $a = F_{net}/m$.
Gravity attracts masses and can change speed, direction or both. Our asteroid scenario is fictional.

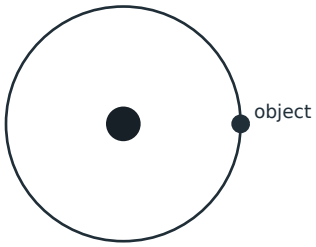

Worked reasoning: A fictional asteroid has a velocity arrow pointing right. A brief upward force gives it an upward change in velocity. The new velocity combines the original rightward motion with this change.

Your turn: Draw the original velocity, the change, and the resulting velocity tip to tail.

Marzano check - circle: ① ② ③

03 Look and explain

Sketch the velocity and gravitational-force arrows at the marked point on the orbit. Why do they point in different directions?

The center is the attracting body; the small dot on the circle is the orbiting object.

Marzano check - circle: ① ② ③

04 Build the solution

A probe moves right at 4 m/s. During one second its velocity gains a 1 m/s downward component. Describe and sketch the new velocity.

Marzano check - circle: ① ② ③

What changes an asteroid’s path?

antocciphysics

05 Use the idea

A student says space has no gravity because astronauts float. Explain how orbiting astronauts can be falling.

Marzano check - circle: 1 2 3

06 Choose a method

With a fixed net force, a 5 kg system accelerates at 14 m/s². Predict acceleration for a 10 kg system. State a control needed for this comparison.

Marzano check - circle: 1 2 3

07 Exit check

Name one observation that shows velocity is changing even if speed stays the same.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Compare an upward force acting briefly with the same force acting longer on the same object. Sketch how their path changes differ.

Marzano check - circle: 1 2 3
