Weight and local gravity

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Distinguish mass from gravitational weight.

SUCCESS CRITERIA - I can...

1. Use mass in kg and force in N.
2. Calculate weight using the stated local g.
3. Explain how weight changes while mass stays the same.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 5 kg cart starts from rest under 35 N net force right for 4 s. Find acceleration and final velocity. State one assumption.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $F_g = mg$; $g = F_g/m$.
F_g is weight. Field strength in N/kg is numerically equal to free-fall acceleration in m/s².

Worked reasoning: A 3 kg object in a field of 4 N/kg has weight 3×4=12 N. Moving it to a 2 N/kg field halves weight to 6 N but leaves mass 3 kg.

Your turn: Draw weight arrows for the two places and label the unchanged quantity.

Marzano check - circle: ① ② ③

03 Look and explain

The same 2 kg object visits worlds with g=10 and g=5 N/kg. Compare its mass and weight.

World	g (N/kg)
A	10
B	5

Marzano check - circle: ① ② ③

04 Build the solution

A 3 kg bag is on world B. Fill in: weight=3×5=____ N. Would a 6 kg bag have twice or half that weight?

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Weight and local gravity

antocciphysics

Continue down each column.

05 Use the idea

A scale reports 0 N for an astronaut in an orbiting spacecraft. Does that prove Earth exerts no gravitational force? Explain.

Marzano check - circle: 1 2 3

06 Choose a method

A 4 kg object has 32 N right and 8 N left. Draw the forces and find net force and acceleration.

Marzano check - circle: 1 2 3

07 Exit check

A 4 kg object is where g=3 N/kg. State its mass and weight.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Two objects weigh the same on different worlds. Must their masses be the same? Build a numerical counterexample.

Marzano check - circle: 1 2 3
