Gravity above the surface

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use distance from a planet's center to compare fields at altitude.

SUCCESS CRITERIA - I can...

1. Use r=R+h rather than altitude alone.
2. Compare fields with the inverse-square relation.
3. Explain why orbit is not a zero-gravity region.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

---

01 Bring back an earlier idea

Two fixed masses attract with 75 N at separation r. Find the force at separation 5 r and explain the factor.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $r = R + h$; $g_h/g_{surface} = [R/(R + h)]^2$.
R is planet radius; h is altitude. g_h is field strength at altitude h.

Worked reasoning: At altitude h=2 R above a planet's surface, center distance is r=R+h=3 R. A surface field of 18 N/kg becomes 18/9=2 N/kg.

Your turn: Draw the radius and altitude as different line segments. Mark the full center-to-object distance.

Marzano check - circle: ① ② ③

03 Look and explain

A satellite is one planet-radius above the surface. Label R, h and r on a sketch. What is r in units of R?

Marzano check - circle: ① ② ③

04 Build the solution

Surface field is 12 N/kg. At height h=R, center distance doubles. Calculate the new field: 12÷4.

Marzano check - circle: ① ② ③

05 Use the idea

Explain why an astronaut at modest orbital altitude can float even though gravity is only slightly weaker there.

Marzano check - circle: ① ② ③

06 Choose a method

Maximum static friction is 60 N. A 24 N push leaves a box still. Find actual friction. A 72 N push starts sliding with 48 N kinetic friction; find net force.

Marzano check - circle: ① ② ③

07 Exit check

A planet has surface g=9 N/kg. At center distance 3 R, what isg?

Marzano check - circle: ① ② ③

08 STRETCH: Apply it another way

A planet's field is 16 N/kg at its surface. At what altitude in planet radii is it 4 N/kg? Use a sketch.

Marzano check - circle: ① ② ③
