Free-fall lab

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Estimate g from measured motion and discuss measurement limits.

SUCCESS CRITERIA - I can...

1. Keep supplied examples separate from measurements.
2. Find acceleration from a velocity-time slope.
3. Use repeated trials and explain uncertainty.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A supplied gravity model has $Gm_1m_2=75$ N·m² and separation 5 m. Find the force and its direction.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $a = \Delta v/\Delta t$; $v_f = v_i + a\Delta t$.
Velocity-time slope estimates acceleration. Downward is positive. Use the approved apparatus; distinguish supplied from measured data.

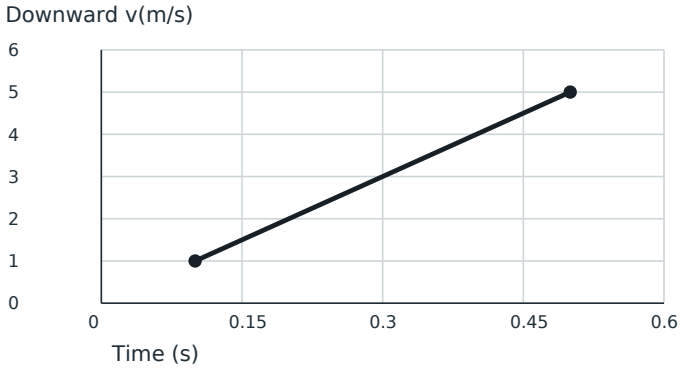

Worked reasoning: Supplied trial values 8, 10, 12 m/s² have mean 10 m/s² and range 8-12. The spread describes variation; averaging does not remove every systematic error.

Your turn: Plot the three values on a number line and mark the mean. Name an error that could shift all trials together.

Marzano check - circle: ① ② ③

03 Look and explain

Use the supplied velocity-time graph to estimate acceleration. Show the change in velocity and elapsed time.

Marzano check - circle: ① ② ③

04 Build the solution

Three supplied trial estimates are 9, 10 and 11 m/s². Find their mean and range. Does variation mean the experiment is useless?

Marzano check - circle: ① ② ③

Free-fall lab

antocciphysics

Continue down each column.

05 Use the idea

Plan three repeated trials. Name a controlled condition, a measurement you will record and a reason not to include a badly pushed release without comment.

Marzano check - circle: 1 2 3

06 Choose a method

A box at rest has 18 N right and 4 N left. Find the additional horizontal force needed for balance and show the sum.

Marzano check - circle: 1 2 3

07 Exit check

An interval changes downward velocity from 4 to 6 m/s in .4 s. Find a and name one source of uncertainty.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Two groups have values 9, 10, 11 and 5, 10, 15 m/s². Compare means and repeatability without declaring either perfectly accurate.

Marzano check - circle: 1 2 3
