Gravity above the surface

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use distance from a planet's center to compare fields at altitude.

SUCCESS CRITERIA - I can...

1. Use r=R+h rather than altitude alone.
2. Compare fields with the inverse-square relation.
3. Explain why orbit is not a zero-gravity region.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

For fixed masses, what separation multiplier makes gravity 1/9 of its original value? What multiplier is needed if both masses also become 5 times as large?

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $r = R + h$; $g_h/g_{surface} = [R/(R + h)]^2$.
R is planet radius; h is altitude. g_h is field strength at altitude h.

Worked reasoning: At altitude h=2 R above a planet's surface, center distance is r=R+h=3 R. A surface field of 18 N/kg becomes 18/9=2 N/kg.

Your turn: Draw the radius and altitude as different line segments. Mark the full center-to-object distance.

Marzano check - circle: ① ② ③

03 Represent and interpret

A satellite is one planet-radius above the surface. Label R, h and r on a sketch. What is r in units of R?

Marzano check - circle: ① ② ③

04 Solve and justify

For Earth use$R=6.4\times10^6$ m, $g_{surface}=9.8$ N/kg. Find g at $h=4.0\times10^5$ m and at h=R.

Marzano check - circle: ① ② ③

05 Analyze the reasoning

Explain why an astronaut at modest orbital altitude can float even though gravity is only slightly weaker there.

Marzano check - circle: ① ② ③

06 Choose a method

A 4 kg box has $\mu_s=0.50$ and $\mu_k=0.40$ on a level floor; g=9.8. Compare pushes of 8 N and 24 N, starting from rest. Find actual friction and acceleration.

Marzano check - circle: ① ② ③

07 Exit check

At what altitude in units ofR is field one quarter of surface value? At what altitude is it one ninth?

Marzano check - circle: ① ② ③

08 STRETCH: Apply it another way

Find the altitude h/R where a spherical planet's field is 10% of the surface value. Explain why h/R is not √10.

Marzano check - circle: ① ② ③
