Stopping time and force

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain how a longer stop can reduce average force.

SUCCESS CRITERIA - I can...

1. Keep momentum change fixed in a fair comparison.
2. Compare force using impulse divided by time.
3. State why cushioning does not remove momentum change.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “impulse” and “interval” to explain your model or result. Sentence starters are optional.

impulse: net force acting over time; change in momentum

interval: the time or range between two stated values

average: one value representing an interval or a set of values

01 Bring back an earlier idea

A 3 kg cart moving at 5 m/s stops in 2 s.
Find momentum-change magnitude and average stopping-force magnitude.

Word help: momentum = mass times velocity, including direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $|F_{avg}| = |\Delta p|/\Delta t$.
For the same momentum change, more stopping time lowers average force magnitude. Bars mean magnitude.

Worked reasoning: A stopping impulse has magnitude 8 N·s. Over 0.2 s, average force is 40 N; over 0.8 s, it is 10 N. Longer stopping time lowers the average force for the same momentum change.

Your turn: Draw both force-time rectangles with equal areas.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Marzano check - circle: ① ② ③

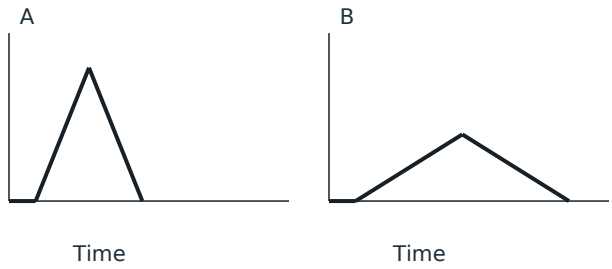

03 Look and explain

The two ideal force pulses have equal area.
Identify the longer-duration, lower-average-force stop.

Word help: ideal = using stated simplifying conditions

Sentence starter: I notice ... . This supports ... because ... .

Force (same scales)

Marzano check - circle: ① ② ③

04 Build the solution

An object loses 20 kg·m/s of momentum. Stop A lasts 1 s; stop B lasts 4 s.
Find each average force size.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

Stopping time and force

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Use the idea

A student says a cushion makes momentum disappear. **Explain** where the momentum change comes from and what cushioning changes.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

06 Choose a method

Downward velocity changes from 4 to 10 m/s in 0.6 s. **Find** acceleration and name one possible measurement uncertainty.

Word help: acceleration = rate of change of velocity

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

07 Exit check

The same object stops from the same speed in twice as much time.
Compare average force sizes.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A cushion doubles stopping time without changing incoming or final velocity.
Compare impulse and average force; state what cannot be concluded about the exact peak force.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3
