Recoil and explosions

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use momentum conservation for an isolated system.

SUCCESS CRITERIA - I can...

1. Choose a system and check external impulse.
2. Add momentum with signs.
3. Explain equal-and-opposite momentum changes.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “recoil” and “external” to explain your model or result. Sentence starters are optional.

recoil: motion backward when another part is sent forward

external: acting from outside the chosen system

conserved: unchanged in total under the stated conditions

01 Bring back an earlier idea

A 3 kg cart travels left at 5 m/s.
Find momentum and draw its direction.

Word help: momentum = mass times velocity, including direction

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $p_{total,\,i} = p_{total,\,f}$.
Negligible net external impulse. Internal forces can change each part’s momentum but not the system total.

Worked reasoning: Two carts initially at rest push apart with negligible external impulse. A 1 kg cart leaves at +4 m/s; a 2 kg cart must have momentum -4 kg·m/s, hence velocity -2 m/s.

Your turn: Draw before-and-after momentum arrows for the two-cart system.

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: ① ② ③

03 Look and explain

Two carts push apart from rest on an ideal track.
Draw their momentum arrows. How must the two momenta compare?

Word help: ideal = using stated simplifying conditions

Sentence starter: Both … . They differ in … because … .

A moves left B moves right

Marzano check - circle: ① ② ③

04 Build the solution

A 1 kg cart moves left at 4 m/s after release. A 2 kg cart moves right. To keep total momentum zero, find the second cart’s speed.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

Recoil and explosions

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Use the idea

Why can the two parts gain kinetic energy during a release while total momentum remains zero?

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

06 Choose a method

Two balls launch horizontally from the same height at 4 and 24 m/s. Ignore air resistance.
Compare fall times and horizontal ranges.

Word help: horizontal = along a level line, usually the x direction

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3

07 Exit check

A 2 kg cart leaves with momentum 6 kg·m/s left. What must the other cart’s momentum be if total was zero?

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Keep a 1 kg cart's departure velocity +6 m/s.
Choose a second cart mass that recoils at -2 m/s.

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: 1 2 3
