Work along a displacement

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Calculate work and identify when a force does no work.

SUCCESS CRITERIA - I can...

1. Identify the force component along displacement.
2. Use meters and newtons to obtain joules.
3. Distinguish effort from mechanical work on an object.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “work” and “displacement” to explain your model or result. Sentence starters are optional.

work: energy transferred by a force along a displacement

displacement: change from initial position to final position, with direction

parallel: along the same direction as a line or surface

01 Bring back an earlier idea

A toy deflection adds 0.3 m/s sideways for a lead time of 50 s.
Find the modeled shift and name an assumption.

Word help: deflection = a change in the direction or path of motion

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: W = Fd.
Constant force parallel to displacement; W is work. No displacement means no work on the object by that force.

Worked reasoning: A constant 5 N pull acts along a 3 m displacement. Work is Fd=15 J. The object must move for this force to do mechanical work.

Your turn: Draw the force and displacement arrows. **Show** the 15 J as area on a force-versus-position graph.

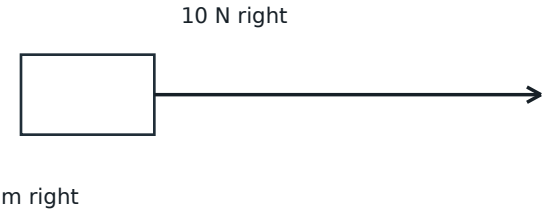

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: ① ② ③

03 Look and explain

A box moves 4 m right while a 10 N force acts right.
Draw force and displacement arrows; predict the sign of work.

Sentence starter: I predict … . My model supports this because … .

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: ① ② ③

04 Build the solution

Calculate work for the picture. Then calculate work if the same force acts over 2 m instead.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

Work along a displacement

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Use the idea

A student holds a heavy bag still. Is the upward support force doing mechanical work on the bag during the hold?
Explain without denying the student feels tired.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

06 Choose a method

The same object stops from the same speed, but the stopping time is 4 times the original.
Compare average stopping-force magnitudes.

Word help: average = one value representing an interval or a set of values

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3

07 Exit check

A 3 N force acts forward through 5 m.
Find its work.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Design two force-and-distance pairs doing 20 J of positive work.
Sketch both.

Sentence starter: My design shows … . It meets the requirement by … .

Marzano check - circle: 1 2 3

Read down the left column, then down the right. Use the open space to draw, calculate and explain.
