Hooke’s law

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect spring displacement with restoring force.

SUCCESS CRITERIA - I can...

1. Measure displacement from the natural length.
2. Use spring constant in N/m.
3. Point the spring force back toward equilibrium.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “spring constant” and “displacement” to explain your model or result. Sentence starters are optional.

spring constant: how much an ideal spring’s force changes per stretch

displacement: change from initial position to final position, with direction

equilibrium: zero net force and zero acceleration

01 Bring back an earlier idea

A wheel rolls down a ramp, losing 15 J gravitational energy. Its center-of-mass kinetic energy gain is 12 J with negligible losses. What energy term is missing?

Word help: negligible = small enough to leave out of this model

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $F_{spring} = -kx$; $|F_{spring}| = k|x|$.
x is displacement from natural length; k is spring constant. The force restores the spring, within its linear range.

Worked reasoning: A spring with k=100 N/m stretches 0.03 m, giving force magnitude kx=3 N. Its force on the attached object points toward equilibrium.

Your turn: Sketch equilibrium and stretched positions, then draw the restoring-force arrow.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Marzano check - circle: ① ② ③

03 Look and explain

A spring is stretched right.
Draw the force it exerts on the attached block. What changes if compressed left?

Sentence starter: The ... in my model represents ... . Its label shows ... .

Mark equilibrium and displacement x.

The zigzag is the spring; the rectangle is the attached block.

Marzano check - circle: ① ② ③

04 Build the solution

A spring has k=100 N/m.
Find force magnitude for .03 m and .06 m stretch.

Word help: magnitude = size of a quantity without its direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Hooke’s law

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Use the idea

A student says k doubles when the stretch doubles.
Explain which quantity actually doubles for the same ideal spring.

Word help: ideal = using stated simplifying conditions

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

06 Choose a method

A 5 N force acts forward through 7 m.
Find work and show the force/displacement directions.

Word help: work = energy transferred by a force along a displacement

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

07 Exit check

k=200 N/m and compression=.04 m.
Find force size and describe direction.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Two springs have k=50 and 100 N/m.
Find stretches that both give 4 N, and compare their stiffness.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3
