Power

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Compare how quickly energy is transferred.

SUCCESS CRITERIA - I can...

1. Distinguish energy in J from power in W.
2. Use power=energy/time.
3. Explain equal work done at different rates.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “power” and “work” to compare your model or result. Sentence starters are optional.

power: rate of energy transfer

work: energy transferred by a force along a displacement

interval: the time or range between two stated values

01 Bring back an earlier idea

A rolling object loses 15 J gravitational energy but gains only 9 J translational kinetic energy.
Name two possible destinations of the difference.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $P_{avg} = W/\Delta t$ = energy transferred/Δt; $P = Fv$. Second equation: force parallel to velocity. Power units: 1 W = 1 J/s.

Worked reasoning: Two motors each transfer 120 J. One takes 3 s, the other 6 s. Their average powers are 40 and 20 W; total transferred energy is equal.

Your turn: Draw equal energy-transfer arrows and label the different times and powers.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

03 Look and explain

Two motors each transfer 120 J. One takes 2 s; the other 6 s. Which has greater average power?

Sentence starter: Both ... . They differ in ... because ... .

Motor	Energy	Time
A	120 J	2 s
B	120 J	6 s

Marzano check - circle: ① ② ③

04 Build the solution

A motor transfers 90 J in 5 s.
Find power. How much energy does it transfer in 6 s at that power?

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

Power

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Use the idea

A 100 W label is described as“100 joules.” Correct the statement and give time information that would make an energy calculation possible.

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: 1 2 3

06 Choose a method

A cart’s kinetic energy changes from 24 J to 4 J.
Find net work and state whether its speed rises or falls.

Word help: kinetic energy = energy associated with motion

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

07 Exit check

Two students do the same lift. One finishes in half the time.
Compare work and power.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Create two devices with the same 50 W average power but different energy and time values.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3
