An energy budget

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect work, motion, heating and an honest model conclusion.

SUCCESS CRITERIA - I can...

1. Keep all terms in consistent energy units.
2. Distinguish mechanical-energy change from total-energy loss.
3. Report assumptions with the energy budget.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “energy budget” and “system” to explain your model or result. Sentence starters are optional.

energy budget: an account of all energy stored and transferred

system: the object or objects chosen for analysis

thermal energy: internal energy associated with microscopic motion/interactions

01 Bring back an earlier idea

An energy account begins with 15 J. It ends with 9 J motion energy and 3 J thermal energy.
Find the unaccounted energy and suggest a next check.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $E_i + E_{in} = E_f + E_{out}$.
i/f = initial/final stored energy; in/out = transfers across the chosen system boundary. Account for every form.

Worked reasoning: An input of 100 J gives 60 J useful motion, 25 J thermal transfer and 15 J sound/other transfers. The account balances because 60+25+15=100 J.

Your turn: Draw proportional energy arrows and calculate the useful fraction.

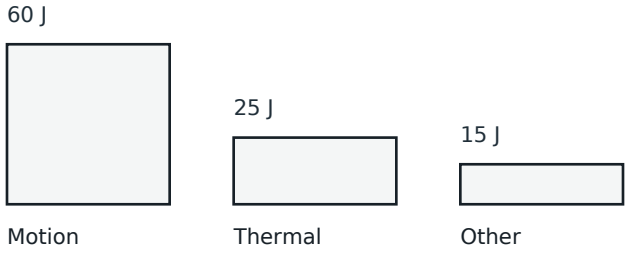

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

03 Look and explain

A modeled system starts with 100 J. It ends with 60 J motion energy, 25 J thermal energy and 15 J sound/deformation.
Draw an energy account and check the total.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Bar height represents energy. Read the value and unit above each bar.

Marzano check - circle: ① ② ③

An energy budget

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

04 Build the solution

A 2 kg cart starts at 4 m/s and receives 8 J work. **Find** initial and final kinetic energy if no losses. Then include 5 J transferred to thermal energy.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

05 Use the idea

What information is missing if an impact report gives only total kinetic energy and says all of it heats the ground?

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: 1 2 3

06 Choose a method

Gravitational potential energy changes from -24 J to -4 J. **Find** ΔU and state whether energy is gained or lost.

Word help: potential energy = energy associated with the configuration of interacting objects

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

07 Exit check

Input energy 40 J yields 30 J useful mechanical energy. **Find** other energy and useful fraction.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Improve useful output to 75 J without changing input. **Design** two possible new thermal/other accounts and explain why data would be needed to choose one.

Sentence starter: My design shows ... . It meets the requirement by ... .

Marzano check - circle: 1 2 3
