Angled and negative work

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use force direction to determine work's sign and size.

SUCCESS CRITERIA - I can...

1. Compare force direction with displacement.
2. Use the parallel force component.
3. Explain positive, negative and zero work.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A fixed impulse changes a target's sideways velocity by 0.03 m/s. Find the modeled shift after 500 s and state a limitation.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $W = Fd\cos\theta = F_{parallel}\,d$.
θ is between force and displacement. CPA uses the supplied parallel component. Opposite force gives negative work.

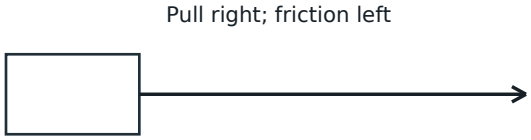

Worked reasoning: A box moves 4 m right while friction acts 3 N left. Friction's work is -3×4=-12 J because force opposes displacement.

Your turn: Draw force and displacement arrows. Add a perpendicular upward force and state its work for this horizontal motion.

Marzano check - circle: ① ② ③

03 Look and explain

The box moves right. Classify work by a rightward pull, leftward friction and upward normal force.

Motion right

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: ① ② ③

04 Build the solution

A rope's forward component is 8 N and displacement is 3 m right. Friction is 2 N left. Find rope work, friction work and net work.

Marzano check - circle: ① ② ③

Angled and negative work

antocciphysics

05 Use the idea

A force perpendicular to velocity can bend a path without changing speed. Explain using work.

Marzano check - circle: 1 2 3

06 Choose a method

Two carts separate from rest with no external horizontal impulse. One has momentum 24 kg·m/s left. Find the other’s momentum.

Marzano check - circle: 1 2 3

07 Exit check

A 5 N friction force acts opposite a 4 m displacement. State work with sign and units.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A pull does +20 J and friction does -8 J. Draw work-transfer arrows and find net work. What changes if friction is twice as large over the same path?

Marzano check - circle: 1 2 3
