Gravitational potential energy

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate height change to near-surface gravitational energy.

SUCCESS CRITERIA - I can...

1. Choose a height reference.
2. Use ΔU=mgΔh with the stated g.
3. Distinguish potential energy from force.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A cart's kinetic energy changes from 15 J to 3 J. Find net work and state whether its speed rises or falls.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Delta U = mg\Delta h = mg(h_f - h_i)$.
Approximately constant g = 10 N/kg. Choose a zero height; the energy change does not depend on that choice.

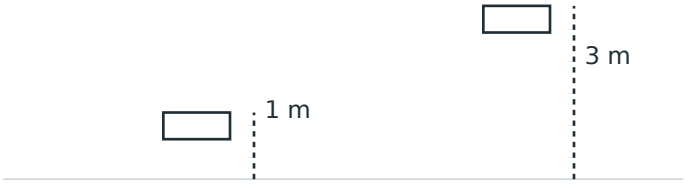

Worked reasoning: Raising a 2 kg object by 3 m with g=10 N/kg increases gravitational potential energy by mgh=60 J. The chosen zero does not affect this change.

Your turn: Draw initial and final height levels and label the 3 m difference.

Marzano check - circle: ① ② ③

03 Look and explain

Two identical books sit at heights 1 and 3 m above the floor. Which has more gravitational potential energy relative to the floor?

Marzano check - circle: ① ② ③

04 Build the solution

Each book is 2 kg. Find U at 1 m and 3 m, then the energy change when lifting from 3 to 3 m.

Marzano check - circle: ① ② ③

Gravitational potential energy

antocciphysics

05 Use the idea

Does a negative value of U relative to a chosen zero imply a negative mass or impossible height?

Marzano check - circle: 1 2 3

06 Choose a method

Equal-mass carts have velocities +6 and -4 m/s before an ideal 1 D elastic collision. Give both final velocities.

Marzano check - circle: 1 2 3

07 Exit check

Lift a 3 kg object by 2 m. FindΔU with g=10.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Construct two mass-and-height-change pairs with the same 60 J increase using g=10.

Marzano check - circle: 1 2 3
