Gravitational potential energy

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate height change to near-surface gravitational energy.

SUCCESS CRITERIA - I can...

1. Choose a height reference.
2. Use ΔU=mgΔh with the stated g.
3. Distinguish potential energy from force.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 3 kg object slows from 7 to 5 m/s. Find net work and check its sign.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Delta U = mg\Delta h = mg(h_f - h_i)$.
Approximately constant g = 10 N/kg. Choose a zero height; the energy change does not depend on that choice.

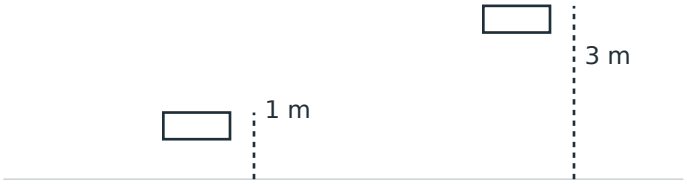

Worked reasoning: Raising a 2 kg object by 3 m with g=10 N/kg increases gravitational potential energy by mgh=60 J. The chosen zero does not affect this change.

Your turn: Draw initial and final height levels and label the 3 m difference.

Marzano check - circle: ① ② ③

03 Represent and interpret

Two identical books sit at heights 1 and 3 m above the floor. Which has more gravitational potential energy relative to the floor?

Marzano check - circle: ① ② ③

04 Solve and justify

A 5 kg load rises from 4 to 7 m. FindΔU. Repeat using a new zero at the original 2 m level and explain what stays unchanged.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Gravitational potential energy

antocciphysics

Continue down each column.

05 Analyze the reasoning

Does a negative value of U relative to a chosen zero imply a negative mass or impossible height?

Marzano check - circle: 1 2 3

06 Choose a method

Two 4 kg carts at +6 and -4 m/s stick. Find final velocity and use kinetic energy to explain why this is not elastic.

Marzano check - circle: 1 2 3

07 Exit check

A 2 kg object descends 4 m. FindΔU and work by gravity.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A 3 kg object moves from 2 m below a chosen zero to 5 m above it. Use g=10. Find initial U, final U and work by gravity.

Marzano check - circle: 1 2 3
