Spring potential energy

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Calculate stored spring energy and distinguish it from force.

SUCCESS CRITERIA - I can...

1. Use displacement in meters.
2. Apply the squared relationship for spring energy.
3. Explain how stored energy can become motion.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A cart starts from rest at height 3 m. Can it reach 5 m with no external energy input or losses? Justify using kinetic energy.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $U_s = \frac{1}{2}kx^2$; $|F_{spring}| = k|x|$.
s means spring. Compression and stretch both store energy relative to the natural length; energy and force are different quantities.

Worked reasoning: A spring with k=200 N/m stretched 0.10 m stores $\frac{1}{2}kx^2$=1 J. Doubling stretch to 0.20 m stores 4 J, not 2 J.

Your turn: Draw force-versus-stretch triangles and compare their areas.

Marzano check - circle: ① ② ③

03 Represent and interpret

The same spring is displaced x and 2 x. Compare stored energies and force magnitudes.

Mark equilibrium and displacement x.

The zigzag is the spring; the rectangle is the attached block.

Marzano check - circle: ① ② ③

04 Solve and justify

A spring with k=200 N/m is compressed .10 m and launches a .50 kg cart on an ideal frictionless surface. Find stored energy and speed after release.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Spring potential energy

antocciphysics

05 Analyze the reasoning

Why is energy positive for both positive and negative x even though spring force reverses?

Marzano check - circle: 1 2 3

06 Choose a method

A 8 N force acts at 120° to a 6 m displacement. Calculate its work and explain the sign.

Marzano check - circle: 1 2 3

07 Exit check

k=80 N/m; stored energy .40 J. Find displacement magnitude and force magnitude.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A 0.5 kg cart is launched by a spring k=400 N/m compressed 0.15 m with no losses. Find release speed. What compression doubles that speed?

Marzano check - circle: 1 2 3
