Refraction

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect a change in wave speed to wavelength and direction.

SUCCESS CRITERIA - I can...

1. Measure ray angles from the normal.
2. Explain frequency continuity at a stationary boundary.
3. Predict bending toward or away from the normal.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A wave has period 3 s. Find the cycles completed in 15 s and its frequency.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $v_1 = f\lambda_1$; $v_2 = f\lambda_2$; $\lambda_2/\lambda_1 = v_2/v_1$.
Stationary boundary: frequency stays constant. A slower medium bends an oblique ray toward the normal.

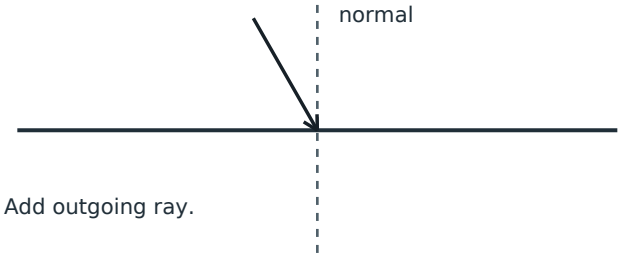

Worked reasoning: Light enters a slower medium at an angle to the normal and bends toward the normal. The normal is perpendicular to the boundary.

Your turn: Draw and label the boundary, normal, incident ray and refracted ray.

Marzano check - circle: ① ② ③

03 Look and explain

Mark the normal at the boundary. A ray enters a slower medium at an angle. Sketch the refracted direction.

Marzano check - circle: ① ② ③

04 Build the solution

Wave speed drops from 12 to 6 m/s; frequency stays 3 Hz. Find wavelength before and after.

Marzano check - circle: ① ② ③

05 Use the idea

A student measures an incidence angle from the surface instead of the normal. If surface angle is 20°, what angle belongs in Snell’slaw?

Marzano check - circle: 1 2 3

06 Choose a method

Samples at 14°C and 56°C are mixed with no energy input or phase change. A student reports 68°C at equilibrium. Is that plausible? Explain.

Marzano check - circle: 1 2 3

07 Exit check

A ray enters a faster medium at an angle. Does it bend toward or away from normal?

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Draw two rays entering a slower medium: one obliquely and one along the normal. Explain why one changes direction and the other does not.

Marzano check - circle: 1 2 3
