The electromagnetic spectrum

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate electromagnetic wavelength, frequency and propagation.

SUCCESS CRITERIA - I can...

1. Use c=fλ in vacuum.
2. Order spectral regions by wavelength.
3. Distinguish electromagnetic from mechanical waves.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

An echo travels 100 m on its full out-and-back path. Find the wall's distance.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: c = fλ; c = 3.0×10⁸ m/s.
Electromagnetic waves in vacuum. Frequency identifies spectral region; mechanical sound needs a medium.

Worked reasoning: In vacuum, all electromagnetic waves travel at c=3×10⁸ m/s. A frequency of 10⁸ Hz gives wavelength 3 m. Higher frequency means shorter wavelength at the same speed.

Your turn: Draw two waves with a common speed but different wavelengths; label which has higher frequency.

Marzano check - circle: ① ② ③

03 Look and explain

Order radio, visible and X-rays from longest to shortest wavelength. Which has greatest frequency in vacuum?

Radio	IR	Visible	UV	X-ray

Label increasing frequency and wavelength.

Marzano check - circle: ① ② ③

04 Build the solution

A toy wave has a speed 12 m/s and frequency 3 Hz. Findλ. Explain what would happen toλif the frequency doubled at fixed speed.

Marzano check - circle: ① ② ③

The electromagnetic spectrum

Continue down each column.

05 Use the idea

Why can sunlight cross space but ordinary sound from a speaker cannot cross a vacuum?

Marzano check - circle: 1 2 3

06 Choose a method

A system absorbs 80 J heat and does 40 J work. Find its internal-energy change using $\Delta U = Q - W_{by}$.

Marzano check - circle: 1 2 3

07 Exit check

For EM waves in vacuum, does changing color change c? What does change?

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Design two frequency-wavelength pairs with product 3×10^8 m/s, using powers of 10.

Marzano check - circle: 1 2 3
