Waves at boundaries

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Describe reflection and transmission at a boundary.

SUCCESS CRITERIA - I can...

1. Identify incident, reflected and transmitted waves.
2. Distinguish fixed-end from free-end pulse reflection.
3. Track energy without assuming equal amplitudes.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

Echoes return at 0.003 s and 0.005 s with the same wave speed. Compare ranges. Does delay alone determine mass?

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $f_{reflected} = f_{incident}$.
At a stationary boundary. A displacement pulse returns inverted from an ideal fixed end and upright from an ideal free end.

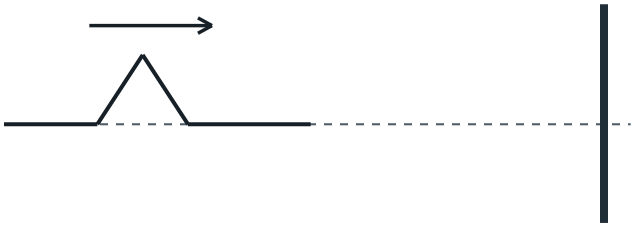

Worked reasoning: At a fixed end, an upward rope pulse reflects downward. At an ideal free end it reflects without inversion. These are different boundary conditions.

Your turn: Draw incident and reflected pulse snapshots for both ends; show propagation directions.

Marzano check - circle: ① ② ③

03 Represent and interpret

An upward rope pulse reaches an ideal fixed end. Sketch the reflected pulse and its travel direction.

Sketch and label your response.

Marzano check - circle: ① ② ③

04 Solve and justify

Incident energy is .80 J; reflected energy is .20 J and absorbed energy .10 J. Find transmitted energy and each fraction.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Waves at boundaries

antocciphysics

Continue down each column.

05 Analyze the reasoning

Does a smaller transmitted amplitude prove frequency changed? Explain what usually fixes the frequency at a stationary boundary.

Marzano check - circle: 1 2 3

06 Choose a method

A 0.4 kg liquid releases 120000 J while condensing at constant temperature. Find latent heat and signed Q for the sample.

Marzano check - circle: 1 2 3

07 Exit check

At a stationary boundary frequency stays 5 Hz while wave speed changes from 10 to 20 m/s. Find wavelength on each side.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A pulse reflects from a fixed end and meets an equal incident pulse. At an instant their displacements are +2 and -2 cm at one point. Find total displacement and explain why zero there does not mean all energy vanished.

Marzano check - circle: 1 2 3
