Coulomb’s law

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate electric force to charge magnitude and separation.

SUCCESS CRITERIA - I can...

1. Identify charge signs before predicting direction.
2. Use inverse-square scaling.
3. Calculate force with charge in coulombs and distance in meters.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A wave travels at fixed speed. A second target is 3 times farther away than the first. Compare one-way travel times.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $F = k|q_1q_2|/r^2$; $k = 9.0\times10^9\ N\cdot m^2/C^2$.
r is separation. Signs determine attraction/repulsion; the equation gives magnitude.

Worked reasoning: Doubling the separation between two fixed charges makes Coulomb-force magnitude one quarter as large. The charge signs determine attraction or repulsion separately.

Your turn: Sketch both separations for two positive charges and label the force directions.

Marzano check - circle: ① ② ③

03 Look and explain

Two opposite charges are moved twice as far apart. Draw their force directions and compare the new force with the original.

Each circle represents one of the labeled objects or charges; r is their center-to-center separation.

Marzano check - circle: ① ② ③

04 Build the solution

The original force is 12 N. Find the force after separation doubles, using new force=12÷4.

Marzano check - circle: ① ② ③

Coulomb’s law

antocciphysics

05 Use the idea

One charge has twice the magnitude of the other. Does it exert twice the force on the smaller charge? Explain.

Marzano check - circle: 1 2 3

06 Choose a method

A 600 Hz sound travels through air. Do air particles mainly move parallel or perpendicular to propagation? Name the wave type.

Marzano check - circle: 1 2 3

07 Exit check

With separation fixed, one charge magnitude triples. What happens to the force magnitude?

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A force is 12 N. Double one charge and double separation. Find the new magnitude and explain each factor.

Marzano check - circle: 1 2 3
