Magnetic fields

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Interpret magnetic field patterns and compass direction.

SUCCESS CRITERIA - I can...

1. Label north and south poles.
2. Trace external field direction from north toward south.
3. Explain why field-line drawings are models.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A total current of 10 A splits between two identical parallel branches. Find each branch current.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $B_{net,\,x} = B_{1,\,x} + B_{2,\,x}$; $B_{net,\,y} = B_{1,\,y} + B_{2,\,y}$. Add field components at the same point. A compass follows the net field. Outside a bar magnet, arrows run north to south.

Worked reasoning: Outside a bar magnet, field arrows run from the north pole toward the south pole. A compass's north-seeking end follows the local field direction.

Your turn: Draw curved external field lines and two small compass arrows at different points.

Marzano check - circle: ① ② ③

03 Look and explain

Label N and S on the bar magnet. Sketch external field arrows and the direction a nearby compass would point.

Marzano check - circle: ① ② ③

04 Build the solution

Two magnets face N toward N. Predict attraction or repulsion. Repeat for N facing S.

Marzano check - circle: ① ② ③

05 Use the idea

A student draws field lines that cross at one point. Explain why this is inconsistent with a single net field direction at that point.

Marzano check - circle: 1 2 3

06 Choose a method

A ray enters a medium with speed 1/4 of its original speed at an angle. Sketch the bend and state whether frequency changes.

Marzano check - circle: 1 2 3

07 Exit check

What does closer spacing of field lines conventionally represent?

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Cut a bar magnet into two pieces in a drawing. Predict the poles on each piece and show the external field pattern qualitatively.

Marzano check - circle: 1 2 3
