Magnetosphere and changing fields

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use evidence to distinguish a magnetic-field model from an unsupported space-weather claim.

SUCCESS CRITERIA - I can...

1. Connect changing magnetic fields with induced electric effects.
2. Distinguish an assumption from an observation.
3. Name evidence required for a space-weather prediction.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

At fixed current, move from r to 3 r from a long straight wire. Using B proportional to 1/r, compare field strength.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $|\text{emf}_{avg}| = N|\Delta\Phi|/\Delta t$; $\Phi = BA$.
Uniform perpendicular field for $\Phi = BA$. Use supplied/measured field changes; an asteroid alone is not evidence of an electromagnetic pulse.

Worked reasoning: A changing magnetic environment can induce voltages in conducting loops. A static magnetic field alone is not the same as a changing flux through a particular circuit.

Your turn: Sketch a conducting loop and field arrows; show one way flux can change.

Marzano check - circle: ① ② ③

03 Look and explain

Draw a coil in a changing magnetic field. Label what changes and where an induced emf could appear.

Marzano check - circle: ① ② ③

04 Build the solution

A supplied toy model gives emf 2 V for one field-change rate. If that rate doubles with the same coil, compare the new emf.

Marzano check - circle: ① ② ③

Magnetosphere and changing fields

antocciphysics

Continue down each column.

05 Use the idea

A headline claims an approaching rock will disable power grids through an EMP, but gives no field measurements or mechanism. Name two pieces of evidence needed before accepting it.

Marzano check - circle: 1 2 3

06 Choose a method

Explain what a potential difference of 6 V means in joules per coulomb.

Marzano check - circle: 1 2 3

07 Exit check

Does a constant flux through a stationary coil create sustained induced emf by Faraday’s law?

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Compare a small loop and a large loop with the same orientation in the same uniformly changing field. Predict which may have greater induced emf and state the assumptions.

Marzano check - circle: 1 2 3
